2022 Canadian Student Wellbeing Survey

CHAPTER 3: Student Stress, Intent to Withdraw, & Optimism

Research carried out by Angus Reid August 2022

Introduction

Background

Universities and colleges around the world partner with Studiosity to provide academic writing and core skills support 24/7, connecting students to help when they need it. They currently work with 75% of universities in Australia, 21 universities in the United Kingdom, and have recently started providing support to Canadian institutions.

As of 2022, Studiosity's services are available worldwide to over 1.6 million students.

For a number of years, Studiosity has run annual Student Wellbeing Surveys in Australia and the United Kingdom, and for the second year, Angus Reid was commissioned by Studiosity to conduct this next wave of research among postsecondary students in Canada.

Research objectives

This annual survey seeks to better understand the motivations, emotions, and demands of postsecondary students in Canada, and how to better tailor initiatives and solutions. The survey investigates key areas of student wellbeing.

This year, the survey focused on topics such as student commitments, motivation, engagement with their institution, cheating, assessment, student stress, intent to withdraw, optimism for the future, study habits, and more.

In addition, specific results were benchmarked with the 2021 survey to better understand how behaviours and attitudes have changed and how these themes have shifted after another year of the COVID-19 pandemic.

Methodology & Sample

Studiosity produced the questions for this survey and Angus Reid Forum gathered the responses from current Canadian postsecondary students via an online survey.

The survey ran from March 10 to March 24, 2022 and gained a total of 1,014 responses.

The sample frame was balanced to ensure representation of men and women in proportion to their overall share of the Canadian postsecondary student population (56% female, 43% male), as well as to ensure statistically significant representation from different regions of the country.

The sample was comprised of 75% full-time students and 25% parttime students, and was conducted in English and French.

Study findings

The study surveyed a representative sample of current postsecondary students from across Canada

Student Sample

In this latest student wellbeing survey, Angus Reid ensured a representative sample of students from across higher education in Canada. This survey was conducted among 1,014 current postsecondary students in Canada.

The sample frame was balanced to ensure representation of men and women in proportion to their overall share of the Canadian postsecondary student population (56% female, 43% male), as well as to ensure statistically significant representation from different regions of the country. The sample was comprised of 75% full-time students and 25% part-time students.

The age breakdown of survey respondents is as follows: 6% aged 18-19, 17% aged 20-21, 28% aged 22-23, 17% aged 24-25, 12% aged 26-29, and 20% aged 30+.

For comparison purposes only, a sample of this size would yield a margin of error of +/- 3.1 percentage points, 19 times out of 20. The survey was conducted in English and French.

Student Breakdown

In 2022, the student respondents were:

Domestic (i.e. paying Canadian tuition fees)

4%

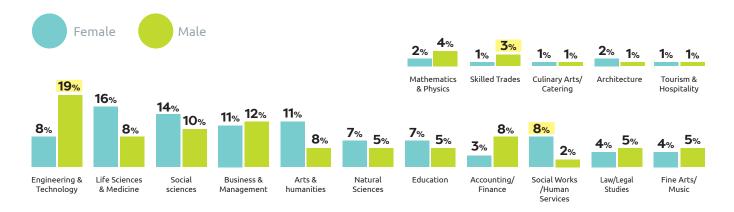

Primarily French-speaking

International (i.e. paying international tuition fees)

86% Primarily English-speaking

AREA OF STUDY

Yellow boxes represent significant differences at 95% confidence.

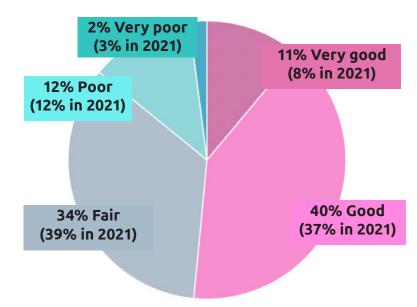

Half of students surveyed said they would describe their overall wellbeing as good or very good, up 6% from 2021

Q. How would you describe your overall well-being at the present time?

STUDENTS STATE OF WELLBEING IN 2022

51% of current postsecondary students surveyed rated their current state of wellbeing as very good or good, 34% rated it as fair, and 14% rated their wellbeing as poor or very poor. By gender, 13% of male students rated wellbeing as very good, which is a statistically significant higher number than female students at 8%.

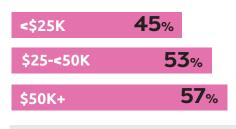

Compared to 2021, there was a statistically significant increase of 6% in students classifying their wellbeing as positive, good or very good, likely in response to the 'new normal' and adapting to the current student experience. Students aged 22-23 saw the biggest increase in rating their wellbeing positively, with 14% more students selecting good or very good in 2022 compared to the previous year. Students in Quebec also rated their wellbeing as good or very good more often at 60%, an increase of 16% from 2021.

STUDENTS STATE OF WELLBEING BY REGION

15% 38% 47% BC Poor/Very Good/Very Good Fair Роог 45% 34% 21% AB Poor/Very Poor Good/Very Good Fair 12% 38% 49% SK/MB Poor/Very Good/Very Good Fair Роог 14% 52% 34% ON Poor/Very Good/Very Good Fair Роог 12% 60% 28% QC Poor/Very Good/Very Good Fair Роог 11% 54% 34% ATL Poor/ Good/Very Good Fair Very

% OF STUDENTS STATING WELLBEING VERY GOOD/GOOD BY INCOME

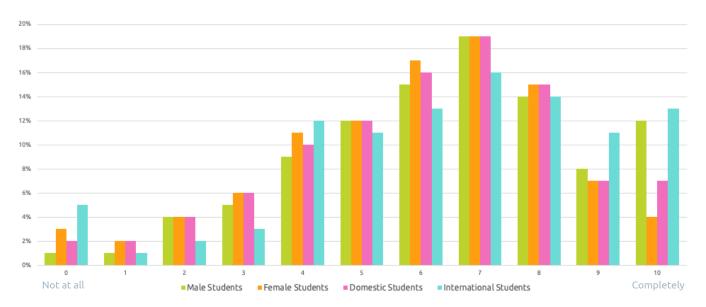

By language, 58% of French -speaking students stated their wellbeing as good or very good, an increase of 13% from 2021 compared to only a 5% increase amongst English-speaking students in 2022.

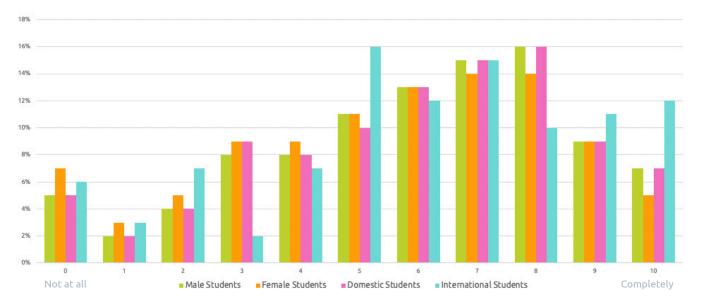

Regional variances were identified with students in Quebec, Ontario, and Atlantic provinces stating their wellbeing more positively as very good or good, especially compared to students in Alberta and British Columbia. There appears to be a statistically significant disparity by household income, as students with household incomes above \$50k rated their wellbeing most positively. By area of study, students enrolled in social science programs appear to rate their wellbeing least positively with 41% of students rating their wellbeing good or very good, 10% lower than total.

On average, students rate their state of happiness, as well as their state of anxiety, six-of-ten

Q. Overall, how happy did you feel yesterday?

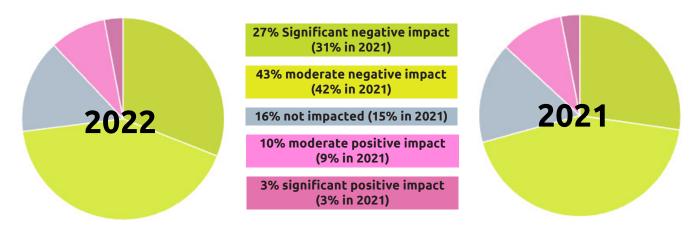

When looking at self reported happiness, on average, students chose 6/10 with the highest number of students selecting between 6/10 to 8/10. More frequently did male students choose 10/10, with a statistically significant increase of 8% over female students. Students who are working full-time jobs chose 9/10 or 10/10 more frequently, and with statistical significance, compared to students who are working casual/ temporary jobs and students who are currently unemployed. At the other end of the scale, 3% of total students did not feel happy at all, yet 5% of international students also chose that same option.

Q. Overall, how anxious did you feel yesterday?

Regarding current levels of anxiety, on average, students also chose 6/10 with the highest number of students selecting between 6/10 to 8/10. When looking at the middle of the scale, students aged 22-23 chose 5/10, 21% of the time, and 10% higher than the average. More students that are currently working full-time chose an anxiety level of 10/10 (12%) compared to students working casual or temporary work (3%) or not employed at all (6%), which could signal the impact competing priorities has on student anxiety.

Seven-in-ten students say the ongoing coronavirus pandemic had a negative impact on their college/university experience

Q. What impact, if any, has the coronavirus pandemic had on your college/university experience?

Unsurprisingly, after another year the coronavirus pandemic continues to have a negative impact on university experiences, with over half of students saying it has done so significantly, despite a slight decline from 2021. Groups most likely to say the pandemic has had a net negative impact on their college/university experience are Atlantic Canadians (82%) and arts/humanities students (80%). By region, there was a 14% decrease in students in Alberta reporting a negative impact on their experience, and a 12% increase in reporting positive impact on their experience in 2022.

Q. How has the coronavirus pandemic negatively impacted your college/university

experience? Select all that apply.

Since last year, there has been a significant decline in the proportion of students expressing a negative impact on various in-person aspects of the university experience, including face-to-face time with academics, lectures and extracurricular activities. The biggest change in findings from 2021 results is the impact on classes having moved online, with 13% fewer students selecting this option, signaling this is now the norm. In terms of time spent on campus, 2022 results remained fairly consistent.

					1					
		2021	Male	Female	18-19*	20-21	22-23	24-25	26-29	30+

Across many of the common stressful aspects that postsecondary students experience, domestic students express significantly more stress than international students, though international students are twice as likely to say it's been difficult for them being away from friends/family.

Expanding access to financial services & aid has replaced a return to inperson learning as the priority for helping students combat stress

Q. What do you think could help combat many of these issues?

With more students returning to campuses in the past year, expanding access to financial services & aid has replaced a return to in-person learning as the greatest priority for helping students combat stress. More access to financial services and aid was significantly higher among female students (55%, vs. 45% of male), and returning to in-person learning was significantly higher among male students (50%, vs. 41% of females) and students aged 18-19 (61%). When it comes to smaller tutorial/lecture sizes, female students chose this option significantly more often (42%, vs. 35% of male students).

OTHER, PLEASE SPECIFY [OPEN-ENDED RESPONSES - MORE IN APPENDIX]

"Complete overhaul of my program. It's operating on outdated assumptions about course load and student life, and clearly hasn't considered the student experience in the program planning." "The solutions seem too far to know what to do because Alberta Education has allowed a deviation so far from normal." "You keep mentioning returning to in-person but I'm much better mentally when lectures are online - I would rather not have to worry about the health of my friends and family in addition to my work and studies."

"Access to online classes even if the class has come back in person. I struggle with my health and pain, I can't always drive."

"Cheaper costs of living so I don't

have to work so much".

"Free University so I wouldn't have to worry so much about putting my family in massive debt in the future. Or grants for parents."

"More constructive tests and exams, maybe some study or help sessions, less long 3+ hour exams."

"Lower tuition, more understanding of the schedule of working professionals."

> "Make sure students really grasped/ comprehend the knowledge that they were taught."

Not forcing a return to in-person learning. Keeping it a choice if you want to go in or not."

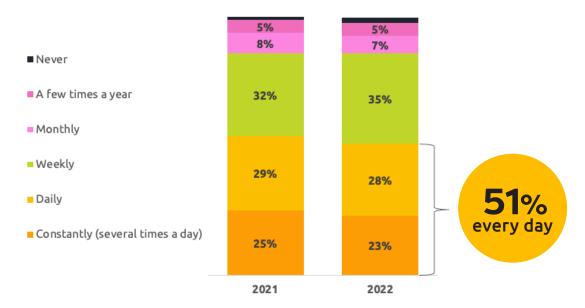

"Hybrid style classes / No in-person attendance marks for lectures or tutorials - (All classes and labs should be able to be accessible and completed at least in part on-line.)" "Increasing the time limit of the degree (so I can take less courses per semester). Or allow me to take more than 2 courses per semester so I can quickly finish the degree."

"Continue to offer all classes remotely. In person class offers me no additional benefits but does cause significant stress trying to commute in rush hour traffic."

"We need guidance. We need supervisors who actually supervise: give us goals help nudge us along and sometimes just tell us it will be ok." "Lighter workloads, end-ofyear assignments instead of exams, fewer required course, more interactive learning instead of only lectures, and a lower cost of schooling."

Q. On average, how often do you feel stressed by studying/schoolwork?

While nearly all postsecondary students experience stress at least occasionally, there are stark differences in frequency between younger and older students: 62% of students aged 18-21 say they feel stressed by studying/schoolwork every single day, compared to 48% of students aged 22+. Female students are significantly more likely than male to say they feel constantly stressed (27% vs. 18%, respectively). Students aged 18-19 (37%) are most likely to express that they feel constantly stressed. Full-time students (25%) appear more consistently stressed compared to part-time students (15%), as well as undergraduate students (26%) and students enrolled in life science & medicine (28%), natural sciences (30%), and social sciences (27%) programs.

10

Students continue to be divided in how supported they feel by their college/university

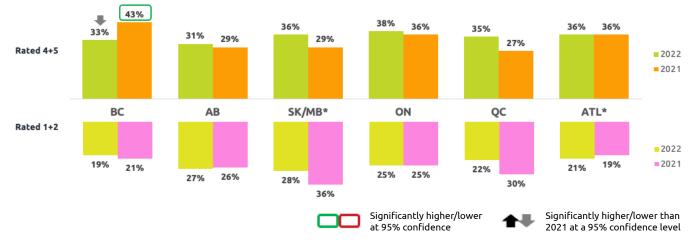

Q. On a scale of 1 to 5, how supported do you feel by your college/university?

Overall, students continue to be divided in how supported they feel by their college/university, with male students twice as likely (13% vs. 7% in 2021) as they were last year to say they feel completely supported. Students aged 24-25 also report feeling more supported than the total, and are three times more likely to report feeling fully supported compared to last year (10% vs. 3% in 2021).

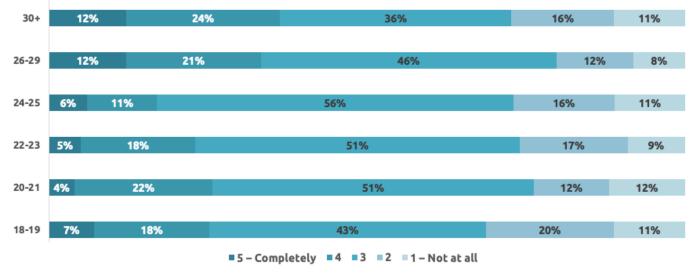

Students in British Columbia stood out in 2021 as being by far the most satisfied with the level of support they've received from their college/ university, but this difference seems to have evaporated in 2022.

SUPPORT AGREEMENT BY REGION

Q. a scale of 1 to 5, how supported do you feel <u>by the existing student support services</u> at your college/university?

STUDENT SERVICES SUPPORT AGREEMENT BY AGE

Generally, the majority of students rated the support they receive through student support services at 3/5. Students aged 26-29 and 30+ report feeling more completely supported at 12%. In the top two boxes, primarily English-speaking students felt more supported at 28%, compared to 17% of primarily French-speaking students. Students with a household income less than \$25k felt less supported at 32% for the bottom two boxes, compared to those with household incomes \$25-50k (26%), and \$50k+ (21%).

Two-in-five students have seriously considered withdrawing from their college/university, up five percentage points from 2021

29% 33% 56% Don't know/Not sure Disagree Strongly Disagree 27% 26% Disagree Agree 25% ■ Strongly Agree 21% 40% Agree 🛨 + 5 from 2021 14% 14% 2021 2022

Q. [Agreement] I have seriously considered dropping out of university.

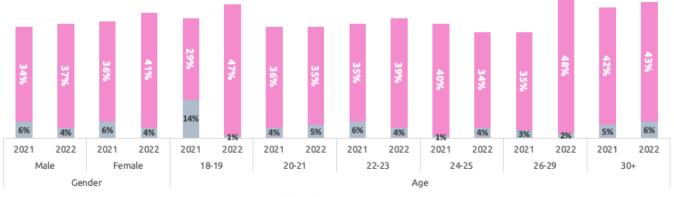

Two-in-five (40%) students have seriously considered dropping out of their college or university program, up five percentage points from last year. Ontario appears to be driving this increase (41%, up from 32% in 2021).

40%

адгее

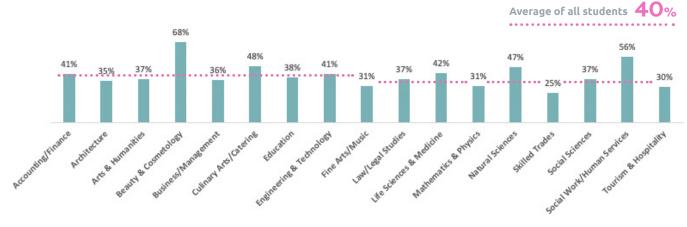

Nearly half (47%) of students aged 18-19 have seriously considered dropping out of university, a substantial increase from 2021 (29%), and there is a significant increase in agreement from 2021 among full-time students (38%, up from 31%).

CONSIDERATION OF WITHDRAWING BY TRACKED DEMOGRAPHICS

Much like the increase amongst students aged 18-19, students aged 26-29 also report that they have seriously considered withdrawing from their college/university more in 2022, at 48%, up 13% from 2021. Students aged 18-19 tend to be more sure of their responses in 2022, with a decrease of 13% in the "don't know/not sure" category, more than any other age group surveyed. In 2022, more female studentsreport having considered withdrawing at 41%, compared to 37% of male students, with the same proportions selecting the "don't know/not sure" option.

AGREEMENT CONSIDERATION OF WITHDRAWING BY AREA OF STUDY

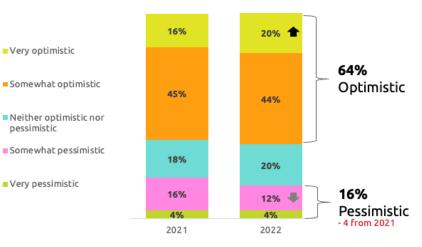

12

Two-thirds of students remain at least somewhat optimistic about their employment outlook after college/university

Q. Thinking about the future, how optimistic or pessimistic are you about your job prospects after leaving college/university?

Nearly two-thirds of Canadian postsecondary students remain at least somewhat optimistic about their employment outlook after college/ university, with a modest increase since last year in the proportion describing themselves as "very optimistic".

There continues to be a clear divide between students who already have full-time/part-time jobs and those who do not. Optimism is higher among those with full-time (71%) and part-time (65%) jobs, and students not currently working are twice as likely as those with full-time jobs to be pessimistic about their post-graduation employment prospects (21% vs. 11%).

Q. Thinking about the future, how optimistic or pessimistic are you about your job prospects after leaving college/university?

"The best offer that

college/university

the students all the

knowledge that they

need for their future

their job prospects.

VERBATIM [OPEN-ENDED RESPONSES - MORE IN APPENDIX]

"More connection with partner companies to help graduated students find more job opportunities in shorter time, more guidance towards their career, offer more post-graduate assistance on their first years in the work field."

"The long term sustainability promised by the university is not reflected in the jobs/ partnership with coop programs available. There are way too few green economy jobs.

"Giving us a real job shadowing experience."

"More networking events and education about finding work post-graduation (workshops etc).

"Give me better opportunities in mv could make is to teach final year to ease the transition into getting a job, be it more co-op opportunities job. Only the merits of or more internship the students can make opportunities" them optimistic about

> "More assistance with employment post graduation."

"I'm a mature student, and I certainly felt connected when I was at university when I was younger. Now in my 30s, between my jobs, school, and existing communities and social circles, I really just need to focus on my classwork."

"Focused job opportunities that cater to students strengths."

Q. If you could start all over again, how likely is it that you would choose the same degree/program again?

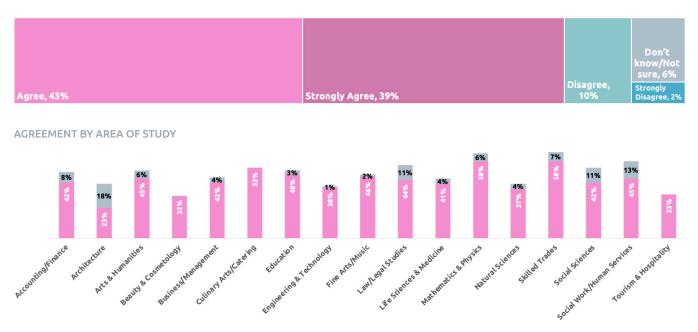

Overall, 80% of Canadian postsecondary students say they would likely choose their same degree or program again.

Substantially more students in business/management programs say they would not be likely to choose the same degree/program if they could do it over (25%). Students in engineering/technology programs are significantly more likely (45%) than those in life sciences (29%) and natural science (30%) programs to say they would very likely choose the same degree over again.

13

Two-thirds of students remain at least somewhat optimistic about their employment outlook after college/university

Q. [Agreement] Physical university campuses will still exist in 20 years' time.

Q. Finally, how do you think colleges & universities will evolve in the next five years?

VERBATIM [OPEN-ENDED RESPONSES - MORE IN APPENDIX]

revenue. There will be less

faculty, less critical thinking

and more focus on skills

"Probably will continue to offer hybrid (remote and in-person learning). "As the pandemic seems to "A return to campus, but greater "Colleges and universities be declining. Hopefully more ability to create online materials. I would most likely transition college/university activities think campuses are going to struggle More adult students. Q. What do you think could help combat many of these issues?

OTHER, PLEASE SPECIFY [OPEN-ENDED RESPONSES]

As of February all my classes are in person
Make sure students really grasped/ comprehend the knowledge that they were taught.
Longer course time
none
Cheaper costs of living so I don't have to work so much
more constructive tests and exams, maybe some study or help sessions, less long 3+ hour exams
More online classes
Not forcing a return to in-person learning. Keeping it a choice if you want to go in or not.
Less work
Nothing
The solutions seem too far to know what to do because Alberta Education has allowed a deviation so far from normal.
Managing my time better
you keep mentioning returning to in-person but I'm much better mentally when lectures are online - I would rather not have to worry
about the health of my friends and family in addition to my work and studies
Access to online classes even if the class has come back in personnalité. I struggle with my health and pain, I can't always drive.
Return to online learning and hybrid structures that allow the choice of online classes.
not having the vaccine mandate prevent me from finishing my program.
Peer study groups and sessions
CHEAPER PRICES
Complete overhaul of my program. It's operating on outdated assumptions about courseload and student life, and clearly hasn't
considered the student experience in the program planning.
Hybrid style classes / No in-person attendance marks for lectures or tutorials - (All classes and labs should be able to be accessible and
completed at least in part on-line.)
More general accessibility in classes for people struggling with mental illnesses
Revised syllabi, most of my bad grades are due to either not properly taught material or material quality was not adequately organized or
properly chosen
Allègement des charges de travail
Des professeurs plus compétents et compréhensif, moins de charge de travail, plus de flexibilité

APPENDIX: STUDENT STRESS Q. What do you think could help combat many of these issues? (Continued)

OTHER, PLEASE SPECIFY [OPEN-ENDED RESPONSES]

Completely online based learning and assessments, reforming school administration to be efficient, reasonable and accomodating. Nothing comes to mind

Réduction massive des frais de scolarité et bourses garanti pour les étudiants de cycle supérieur

Lower workload (academic and teaching/working)

Charge de travail moins lourde

Lighter workloads, end-of-year assignments instead of exams, fewer required course, more interactive learning instead of only lectures, and a lower cost of schooling.

The cost of education was inflated due to government student loans being available. So, Uni would increase the costs and kids would take more loans. The Uni gets money and the banks get indebted youth, and the government can sway the youth vote if a politician lies about relieving student debt. Essentially everyone but the taxpayer benefits from blatant increase in tuition... incase you didn't know, all online covid courses costed the same as when everyone had to meet in person with their material.

Not having alt-right convoys occupy the capital and not having Russia kill innocents on video. The constant exposure to the online world coupled with bad news making headlines means that all I ever see is worrying information.

The curriculum needs to be more focused on training students for real life problems or career problems

professors who take on fewer students to supervise for their thesis- so that they can be responsive- PLUS they should inform of you of their sabbaticals and provide a backup supervisor while they're gone- also there should be a checklist of how often they should meet with you and how much support they should provide you with- there's no guidelines and it's really rough

Just a couple long weekends so I can return home and see my family and go on a short vacation together.

Also I wish school management would focus more on the big picture (education and being reasonable) things than small power tripping things.

Less politically charged staff

removing mask mandates

Universities should not charge PhD candidates full tuition. At that stage, the candidate is focused on research and writing, not taking classes. Indeed, PhD candidates are often teaching classes at that point. When funding "runs out" after four or five years and the student advances to candidacy is the most financially, socially, and emotionally difficult time.

Less demanding time requirement (engineering specifically)

Profs that know how to teach

Lower tuition, more understanding of the schedule of working professionals.

Free University so I wouldn't have to worry so much about putting my family in massive debt in the future. Or grants for parents Lower cost of school

Smaller work load with more focus on learning than grades

accepting that students learn in different ways and need to be accommodated

Allowing all students back on campus!

None of the above

36

Q. What impact, if any, has the coronavirus pandemic had on your college/university experience?

Q. How has the coronavirus pandemic negatively impacted your college/university experience?

OTHER, PLEASE SPECIFY [OPEN-ENDED RESPONSES]

The college was feeding me for free now I am not being fed
I haven't been able to safely work in healthcare while at university.
I also took a semester off school and worked full time last Spring
Campus life was far more restricted
Too stressed out, taking fewer classes - graduation will be delayed by several years.
I meant to click positive
I was kicked out of university for 2 semesters because I'm unvaccinated.
Worse physical health/weight gain - not going to college frequently means I've been walking less
The repeated shifts from online to in-person, back to online, have made things difficult.
My grades have been lower because of the toll that Covid has had on my mental health.
Campus resources haven't been easily available (library, study spaces, equipment, printing, etc)
I don't know if I will be able to complete my program.
I've struggled to balance my desire to protect my health with my desire to complete my practicum hours. My whole program has been
delayed by a year.
Professors not understanding how to conduct online classes, getting no support from the university, and taking out their confusion and
frustration on students.
Struggle to get employed
My husband - and main financial support- can't get a job in this climate.
staying inside for a whole year, even with classes online, is horrible for one's mental wellbeing
Disruption to study environment
Struggled to focus because I'm at home with online courses
Forced Vaccination to be on campus
My program is a set cohort and we've never all met in person
Having to pivot doing research
Burnout
Cancelled exchange
We were online part of the semester
No lab experience due to online learning, hurting my job prospects since many other universities let labs occur in person
My program was extended by one year due to lost clinical time
Online placements
Le manque flagrant d'aide financière en allant à travers d'une pandémie mondiale était très peu apprécié
Health effects from COVID
Had our schedule changed mid semester which screwed up everyone's lives.
Too many online meetings and screen time.
I was unable to enrol, even in online courses, due to not having the series of covid vaccines.
finding research participants has been really hard bc of the pandemic- and professors are not understanding of the challenges with
undertaking data collection at this time
It seems that instead of cooperating, students and teachers are in a constant battle with school management about nitty gritty things
that shouldn't matter.
Course quality down and workload up
The university has become considerably more polarized and political.
I've had to pay full tuition for two years despite not taking classes (I've been a doctoral candidate throughout the pandemic), having
limited or no access to the libraries and other facilities, and my supervisor has provided almost no supervision.
Vaccine mandates have had andiscriminatory impact on my learning and ability to attend on campus classes.
I wasn't able to go on an exchange
I was incredibly wrongfully discriminated against for not being vaccinated for COVID19. I am completely disgusted that our institutions
barred perfectly healthy young individuals from getting an education because they practiced their right to bodily autonomy.
None of these
Less work
Slower pace of assignments
Nothing. It's too late. I hate this place.
J'ai déjà de très bonnes notes (4,1 de GPA)
more help from teachers

Q. How has the coronavirus pandemic negatively impacted your college/university

experience? (Continued)

OTHER, PLEASE SPECIFY [OPEN-ENDED RESPONSES]

Charge de travail diminuée et clarification des travaux

Plus grande baisse de la pondération dans les grandes évaluations

J'aurais dû mal à parler pour moi-même ou sais j'ai la chance d'avoir un GPA supérieur à 4.1. Je dirais toutefois que les services psychologiques et l'organisation de groupes de soutien étudiants aiderait probablement beaucoup de mes camarades. Reduced workload (reading and writing assignments, TA duties)

I don't really feel I need any more support.

Encouragement that if you actually submit near perfect work, you can get a near perfect grade. Most profs in my faculty cap at 90% because "nothing is perfect". So... I lose 10% before even starting? I received the award for highest grades in my institution so I am saying this as a student who really tries and can excel. Yet, you also hear of profs passing students for one sentence on a test so that the student doesn't feel sad... so... the first 50% is free in some cases, but the last 10% is inaccessible no matter what you do? Can be discouraging

I'm getting straight As so I don't need help

Lighter workload and flexible deadlines.

Less assignments and more emphasis on teaching and taking up questions in class to prepare for the exams.

you get burned out and thats it, then its a grind. That is what education is today. Minors should be more valued, than just majors Better formats for online classes. Jeez, you guys seem desperate not to acknowledge or give the option to say that the main issue with online learning is the lack of effective and serious attempts to digitize the classroom... Students need more than just pre-recorded videos and silent zoom calls.

more available thesis supervisors with better accessibility and scaffolding

More chances to return home for short periods of time (4-6 days)

None of the above, it's mainly just how much effort I want to put in.

Staff who are open to diverse opinions.

Better school/life balance. Currently 70+hrs a week.

Honestly, I feel like my degree is a joke. I'd be more invested if I felt like I was in a serious academic discipline.

Free University

The whole problem isn't courseload, it my lack of time due to working AND school AND children

I'm just burnt out from being in my last semester and ready to move on

Deeper engagement with a smaller amount of course material

Does not get much better than straight A's - lowering my tuition would be great though

Q. On a scale of 1 to 5, where 1 is "not at all" and 5 is "completely," how supported do you feel by your college/university?

Q. Finally, how do you think colleges & universities will evolve in the next five years?

A bigger shift to online
A few more online classes
A lot more online option
A lot more transition to online learning
a lot of classes will be online. Romm doesn't have any limit of capacity on it.
A lot of dropping out
a lot of remote teaching and learing
A possibility of a college or universities evolving? I am not sure how a school campus could evolve. An idea would be in one area of the
campus; the school decides to change/ upgrade the course learning or equipment used.
A return to campus, but greater ability to create online materials. I think campuses are going to struggle to rebuild the university
experience that existed before.
about the same, maybe more online options
Adding an option to choose a course in person or online
Admin will gut the humanities according to a reductive profit motivated calculus which will sink society further into a dark age.
Admin witt gat the humanities according to a reductive profit motivated catedids which witt shik society further nito a dark age. Advance knowledge and technology
Advance knowledge and cechnology All classes recorded
All classes recorded Allow hybrid courses (mix of online and in person) or allow students to choose between online and in person
An online option for lectures will likely become permanently available for many courses.
As cost effectively as possible
As much as I don't like it, many will probably include more online/virtual elements.
As the pandemic seems to be declining. Hopefully more college/university activities and programs will transition to in-person and more
students and teachers will be more motivated to continue on after what we have all had to go through with regards to COVID-19.
assurément. Possiblement augmentation des cours hybrides (ex: pour une matière, 1 cours sur 2 en ligne)
back to normal
back to class
Back to in person no vaccine required
Badly because of covid
Be able to choose online vs in person campuses
Be more online
Become a dynamic schooling experience
become a lot more digital
Become more more automated.
becoming more flexible
also greater focus on mental health and gender related violence
Before there were nothing to provide as a academic resources for the students so that they can learn from it any time. However, in
present life students can find variety of online resources provuded by the colleges universities. Before five years, students have to pay
for the resources but nowadays it can be find online, universities and colleges giving it for free to access academic materials.
Better courses and learning features
Better development
Better mental health services and optional online learning
Better not be online by default
Better online resources and more asynchronous courses and more off campus options
Both online and in person.
Both online and in-person options, especially for degrees like computer science, where online classes work just as well (if not better)
than in person
By increasing their fees
By keeping aspects of online learning to enhance in person lessons
Can't remember
Care more about students, so that students can boldly put forward their own ideas, and can adopt
Certainement, la technologie va être de plus en plus présente et de plus en plus d'examens vont être faits en ligne.
Certains oui, d'autres non
Chages more fesss, but the quality of education will decrease
College & universities should make sure all students have grasped and comprehend the knowledge by heart.
Colleges and universities will have more online learning a norm , and will have VR/AR to help students learn on the job
Colleges and universities would most likely transition to Online Environments and maybe be apart of the "Metaverse" more often for
remote learning.
Colleges/universities should accept students based only on students merits, NOTHING else. And make sure they get the knowledge they
are supposed to learn by implying more strict learning principles.

Q. Finally, how do you think colleges & universities will evolve in the next five years?

· · · · · · · _ · · · · · ·
colleges/universities will have more co-op programs and online learning options
Considering strategic planning and course development through a climate change lens.
Continue to offer courses online
covid will have made the system stong
Definitely a trend for more on line but welcome in person learning
Definitely more opportunities to take classes online
Definitely move to a more asynchronous style (online).
Depends on the institution and programs offered. More emphasis on Stem
Don't know - seems like all of society is collapsing.
Due to shortfalls in funding, universities will use on-line learning more to reduce expenses and increase revenue. There will be less
faculty, less critical thinking and more focus on skills versus education.
easier and more flexible more options
Education quality will go down, men will leave at a higher rate, there will be less people going there
Either more zoom and less face to face
Either push everyone to need masters degrees or significantly decline
Even more courses will be taught online &!more connections with employment
Evolve to be hybrid online and in person, slow shedding of covid era policies. Weakened culture due to isolation
Evolve to more online learning
Evolving more towards a business model and less as educational institutions.
Fewer people will go to university because the quality of instruction has gone down and campus life is not as fun
Flexibility in delivery: in-person and online
For my subject not really. Because I study chemistry, there is a big amount of lab work required which cannot be transferred to online
study fully police but powwith hybrid options
fully online but now with hybrid options
Future educators will have to face the fact that students will need (and want) to learn in a flexible, personalized format
Get a lot harder
Get more defunded and offer worse service
Get more in person learning. More hybrid models too
Get worse
Give the option of in-person or online stream and record all the lectures.
GIVING FUNDS
Go back to in person class
Go back to normal as COVID lessens
Go more towards online
Gouge students with higher tuition fees and call it inflation while staff don't receive raises
Great easier learning
great sustainable services for the whole family
greater use of digital support resources, ex. online textbooks with study aids
Hard to say, really, given the still-lingering uncertainty of the COVID pandemic.
Have more online options
Have recorded content for students that are unable to attend 1 or many in person classes
Heavy reliance on online learning
hey well they will evolve to be doing better an more productive
Hope they all move online
Hopefully back in person
Hopefully be able to see the students needs instead of their own
hopefully better than we have with covid Dont know whats going to happen in the next 3 to 6 months
Hopefully by finding ways to Improve
Hopefully caring more about their students, offering them some incentives to keep going
Hopefully everything will go back to pre pandemic times that would greatly increase the quality of school for everyone.
hopefully hybrid learning will become an option, students will have the choice to attend in person or online. I think it will become even
more unaffordable
Hopefully more better for finance
Learning that a President earning 200K a year is absurd and should have more focus for students instaed of lying about it. Greedy Higher
ups and not enough support for people who are trying to learn for the future of our country

Research report: Studiosity Canada & Angus Reid

This survey was conducted among 1,014 current postsecondary students in Canada. The sample frame was balanced to ensure representation and statistical significant of gender and region in proportion to their overall share of the Canadian postsecondary student population. The sample was comprised of 75% full-time students and 25% part-time students. For comparison purposes only, a sample of this size would yield a margin of error of +/- 3.1 percentage points, 19 times out of 20. The survey was conducted in English and French.
